Summary

Software engineer building production TypeScript across React/Next.js and Node.js/NestJS. Shipped a multi-tenant SaaS platform 0-to-1 as sole engineer, with live full-stack projects in production. M.S. in Software Engineering; AWS and Azure certified; GxP-regulated pharma background.

Technical Skills

Frontend: React, Next.js (SSR/SSG), TypeScript, JavaScript, Zustand, Tailwind CSS, Accessibility
Backend: Node.js, NestJS, Prisma, Python (Django/FastAPI), PostgreSQL, GraphQL, Redis, RESTful APIs, WebSockets
Build Tools & Testing: Webpack, Jest, Vitest, Playwright, CI/CD (GitHub Actions)
AI-Assisted Development: Claude Code (agentic workflows, TDD)
Cloud & DevOps: AWS (Certified), Azure (Certified), Docker, Microservices
Certifications: AWS Cloud Practitioner, Azure Fundamentals (AZ-900), GraphQL Associate (Apollo)

Experience

Technical Specialist (Contract) Jun 2026 - Present
Advanco SA | Life Sciences MES/LES Software Remote

- Deliver implementations and version upgrades for GxP-regulated MES/LES platforms, covering configuration and connector integration; diagnose and resolve production SQL and application issues for enterprise pharmaceutical clients.

Full-Stack Engineer (Contract) Jun 2025 - Jun 2026
Tracius | Pharmaceutical Serialization SaaS (Early-Stage Startup) Remote

- Engaged on contract as the sole engineer to build the product 0-to-1: a dashboard, multi-tenant auth, and a GS1 Digital Link traceability feature, delivered as a demo-ready MVP for investor demonstrations.
- Architected the full stack as a Turborepo monorepo (Next.js, NestJS, Prisma, PostgreSQL) with shared TypeScript packages, a schema-driven API layer, and JSONB-backed search; end-to-end type inference eliminated a class of runtime API errors.
- Built multi-tenant RBAC (JWT, API Key, Admin Key) with tiered rate limiting (100 to 1,000 req/min) and a role- and resource-extensible permission model, designed so future tenants onboard through configuration rather than custom access-control code.
- Developed a GS1-conformant Digital Link resolver and automated its CI/CD pipeline; load-tested to sub-500ms p95 and the dashboard to sub-2s FCP across 10K+ seeded records.

Technical Specialist Aug 2023 - Jun 2025
Advanco SA | Life Sciences MES/LES Software Remote

- Configured enterprise connectors integrating MES, ERP (SAP), and serialization platforms for end-to-end pharmaceutical traceability, including onsite delivery at Thermo Fisher Scientific (Italy).
- Diagnosed and resolved production SQL issues and application bugs in GxP-regulated MES systems, reducing unplanned downtime across multi-site client deployments.

Software Engineer (Volunteer) Feb 2023 - Aug 2023
The City Tutors | Education Nonprofit Remote

- Cut support tickets by 30% by building a self-service username recovery feature (Python/Django, React) for 800+ users, and redesigned auth flows in an Agile team of 4, improving login success rate by 22%.

Projects

LaunchKit | Next.js 16, React 19, TypeScript, Supabase, Stripe, Anthropic Claude Live Demo | GitHub

- Architected a production SaaS with zero-trust per-user data isolation enforced at the DB layer via PostgreSQL Row-Level Security, a full Stripe subscription lifecycle (3 webhook event types), and real-time AI chat via SSE streaming, on a single Vercel monorepo under strict-mode TypeScript.
- Enforced per-user AI quotas (100 msg/month free vs. unlimited Pro) at the DB layer via RLS, deduplicated server DB calls with `React.cache()`, and shipped Vitest + RTL coverage across 4 domains (DAL, server actions, Stripe webhooks, chat UI).

ColdTrace | Next.js, React, GraphQL Subscriptions, Redis, Recharts coldtrace.app | GitHub

- Engineered a real-time IoT dashboard delivering 4,500+ messages/sec to 30 concurrent clients with sub-350ms p95 latency using WebSockets and Redis PubSub; Recharts views visualize 100K+ data points, surfacing anomalies and compliance violations.

reqq.cc | Next.js, TypeScript, PostgreSQL, Redis, Edge Runtime reqq.cc | GitHub

- Delivered sub-40ms global redirects via Next.js Edge Runtime across 30+ Vercel PoPs; guaranteed atomic click analytics through Postgres stored procedures and maintained data accuracy under 1K+ concurrent requests with RLS-enforced isolation and tiered Redis rate limiting (100 req/min).

Education

Western Governors University Graduated 2026
Master of Science in Software Engineering, Domain-Driven Design Concentration (Python-focused coursework)

Eskisehir Osmangazi University Graduated 2019
Bachelor of Arts in Business Administration, Finance Concentration
